Raleigh, NC 27699-1651 www.ncnhp.org

This list is dynamic and is revised as new data become available. New species are added to the list, and others are dropped from the list as appropriate. The list is generally published every two years. Further information may be obtained by contacting the North Carolina Natural Heritage Program, Department of Natural and Cultural Resources, 1651 MSC, Raleigh, NC 27699-1651 and the North Carolina Wildlife Resources Commission, 1701 MSC, Raleigh, NC 27699-1701. Additional information on rare species, as well as a digital version of this list, can be obtained from the Natural Heritage Program's website at www.ncnhp.org.

Acknowledgements

The North Carolina Natural Heritage Program List of Rare Plant Species of North Carolina was originally compiled and published by Alan Weakley in 1991. It has been revised and updated over the years by Program Botanists Alan Weakley, Jame Amoroso, Misty Franklin, Laura Gadd Robinson, and Brenda L. Wichmann.

Special thanks are given to Misty Franklin, Wesley Knapp, Richard LeBlond, Michael Lee, Harry LeGrand, Suzanne Mason, Linda Rudd, Michael Schafale, Bruce Sorrie, and Alan Weakley for their involvement in the development of the list; to Blanka Aguero, and Paul Davison for assistance with the bryophyte lists; and to Gary Perlmutter and Scott LeGreca for assistance with the lichen list. The list of people who have assisted in the preparation of the vascular plant list, provided information to the NCNHP on rare species occurrences, or otherwise contributed to our understanding of the rare flora of the state are too many to mention, but a partial list of recent contributors includes: Chloe Alexander, Nell Allen, Herb Amyx, Pat Amyx, Geoff Austin, Aster Ayer, Rex Badgett, Chris Baranski, Mark Basinger, Moni Bates, Brady Beck, Sean Bloom, Alvin Braswell, Ben Brewer, Ken Bridle, Hannah Cabell, Kevin Caldwell, David Campbell, Owen Carson, Logan Clark, Crystal Cockman, Merry Conlin, Lindsey Corbin, Ed Corey, Katherine Culatta, Olivia Dannemiller, Becky Dill, Jamey Donaldson, David Dumond, Maria Dunleavy, Bryan England, Matt Estep, Rob Evans, Laura Fogo, Sam Fritz, Sue Fruchey, Brandon Fuller, John Fussell, Lisa Gaffney, David M. Gardner, Jeff Glitzenstein, Cheryl Gregory, Tom Govus, Steve Hall, Jonathan Horton, Stephanie Horton, Tom Howard, Kimberly Israel, Alicia Jackson, Andrew Jenkins, Gary Kauffman, Josh Kelly, Lisa Kelly, Jay Kranyik, Sarah Krementz, Alexander Krings, Mike Kunz, Lenny Lampel, Ron Lance, Charles Lawson, Richard LeBlond, Kira Lidloff, Emma Litra, Kate Loughran, Merrill Lynch, Jeff Marcus, Jim Matthews, David McAdoo, Carol Ann McCormick, Hervey McIver, Patrick McMillan, Rachel Milkereit, William Moye, Helen Nocito, Carl Nordman, Sean Oakley, Cary Paynter, Bob Peet, Mark Peifer, Bubba Peifer, Dan Pittillo, Derick Poindexter, James Poling, Gerald Pottern, Ben Pugh, April Punsalan, Milo Pyne, Lloyd Raleigh, Johnny Randall, Duke Rankin, Evan Raskin, Rebekah Reid, Jerry Reynolds, Jessica Roach, Justin Robinson, Mark Rose, Tim Savidge, Jess Schaner, Ed Schwartzman, John Shaw, Chris Sheats, Dale Shew, Roger Shew, David Siripoonsup, Alan Smith, Matt Smith, Jennifer Stanley, Lesley Starke, Dale Suiter, Megan Sutton, John Taggart, Craig Ten Brink, Samantha Tessel, Robert Thornhill, Mike Turner, Julie Tuttle, Chris Ulrey, Eric Ungberg, Cason Verhine, Dakota Wagner, Wade Wall, Danny Walsh, Bobby Ward, Scott Ward, Tom Wentworth, Zach West, Brandon Wheeler, Rickie White, Chris Wilson, Julian Wilson, and participants in the Carolina Vegetation Survey.

We sincerely appreciate each of the collaborators, volunteers, and landowners who provide data to North Carolina's Natural Heritage Program.

NCNHP RARE PLANT LIST INTRODUCTION

The Natural Heritage Program List of Rare Plant Species of North Carolina contains information about plant species that have a state or federal legal status or are considered rare or uncommon in the state by the North Carolina Natural Heritage Program (NCNHP). This information helps NCNHP identify and evaluate areas of natural significance and helps us prioritize sites for land conservation. It is also helpful in determining priorities for natural resource inventory and assisting in environmental assessment and land management.

The North Carolina Natural Heritage Program is authorized under the Nature Preserves Act (G.S. 143B-135.250 - 143B-135.272) to compile and maintain data and information relevant to the protection of North Carolina's most important natural areas. The Program takes the lead role in the inventory and assessment of the state's natural diversity and the identification of important natural areas and rare species habitats. This information is used along with input from federal and state agencies to compile the Natural Heritage Program List of Rare Plant Species of North Carolina.

NCNHP thanks the many individuals who have contributed to the list over time. Please view the acknowledgements page and read below to learn how you may contribute data.

List Format

The Natural Heritage Program List of Rare Plant Species of North Carolina is available in both document and spreadsheet formats. The document lists species organized by five major taxonomic groups: Vascular Plant, Moss, Liverwort, Hornwort, and Lichen. Within a given group, species are listed alphabetically by scientific name. A common name is provided as well as the status and rank for each taxon. The supplementary spreadsheet allows for sorting and filtering and provides additional information on the geographical distribution and habitat for each taxon. To learn more about the information provided in the list please review the Explanation of Information document for details.

NC Natural Heritage Inventory

The Program maintains and continues to build the Natural Heritage inventory for the state of North Carolina. This inventory is the single most comprehensive compilation of records documenting the location and ecological status of rare plant species in the state. Staff ecologists, botanists, and zoologists, and cooperating agencies conduct the ongoing research and field surveys to generate information for the inventory. Data and information are also supplied by an extensive network of botanical professionals and volunteer citizen scientists. We derive records from historical reports, herbarium specimens, agency records, iNaturalist, in addition to precise reports and maps of field observations.

Tracking

The rare plants in North Carolina are monitored (or tracked) in the Natural Heritage database. The Program tracks approximately 950 plants including vascular plants, bryophytes (mosses, liverworts, hornworts), and lichenized fungi. For all tracked species, we conduct conservation status assessments following NatureServe methodology, and map standardized occurrences in the NatureServe Biotics data management system, which includes maps and tabular data.

Status and Rank

The North Carolina Natural Heritage Program (NCNHP) maintains information on the legal status (federal and/or state) for all rare plants in North Carolina. A state rank is also determined and maintained for all plants known to occur in the state.

Many species that lack formal federal or state legal protection are nonetheless rare or uncommon in North Carolina. To convey information about the rarity of these plants within the state, NCNHP provides status designations that fall into two categories: Significantly Rare (SR) or Watch List (W). The North Carolina Status codes and definitions are provided in the Status and Rank Definitions for Plants document. The Program collects data on these species in addition to those with a legal protection status.

Number of Plant Taxa in North Carolina By Status

The table below indicates the number of taxa tracked in each taxonomic group and status category. Because some taxa have both a North Carolina (NC) and a United States (US) status, totals cannot be added across complete rows. The total number of taxa in North Carolina is an estimate of the taxa that currently or historically occurred in the state.

Group	Approximate number in NC	NC-E	NC-T	NC-SC	SR	US-E	US-T	US-C	W1	W7
Vascular Plants	4340	174	159	119	293	16	11	1	170	223
Mosses	264	0	0	1	119	0	0	0	8	63
Liverworts	112	0	0	3	56	0	0	0	5	17
Hornworts	5	0	0	0	1	0	0	0	1	1
Lichens	253	1	1	2	31	1	0	0	4	21
Total	4974	175	160	125	500	17	11	1	188	325

Contribute Data

NCNHP requests locality and population information for the species listed in the North Carolina Natural Heritage Program List of Rare Plant Species of North Carolina as well as those species designated as Watch List. To provide observations, data and information, please complete a NCNHP Plant Survey Form. You may also contribute data via iNaturalist. Please visit the NCNHP profile on iNaturalist and read the journal posts to learn more about how to join the project.

EXPLANATION OF INFORMATION provided in the North Carolina Natural Heritage Program List of Rare Plant Species of North Carolina

The **North Carolina Natural Heritage Program List of Rare Plant Species of North Carolina** is available as a document and a spreadsheet.

TAXONOMY

Taxonomic Group – Each taxon is categorized into one of five major groups: Vascular Plant, Moss, Liverwort, Hornwort, and Lichen.

Scientific Name – The binomial or trinomial taxon name is provided. Scientific authorities for names have been omitted to save space. Scientific names are standardized to follow the taxon concepts and nomenclature used by the following standard references:

Vascular Plants (dicots, monocots, gymnosperms, ferns, and fern allies): Weakley, A.S. Flora of the Southeastern United States, 2024 Edition. University of North Carolina Herbarium (NCU), North Carolina Botanical Garden, University of North Carolina at Chapel Hill (available online at <https://ncbg.unc.edu/research/unc-herbarium/floras/>)

Lichens: Perlmutter, G. and T. Howard. 2024. Lichens of North Carolina [Internet]. Raleigh (NC): North Carolina Biodiversity Project and North Carolina State Parks. Available from <https://auth1.dpr.ncparks.gov/lichen/index.php>.

Bryophytes (mosses, liverworts, hornworts): Amoroso, J.L., B. Aguero, D. DuMond, and T. Howard. 2024. The Bryophytes of North Carolina [Internet]. Raleigh (NC): North Carolina Biodiversity Project and North Carolina State Parks. Available from <https://auth1.dpr.ncparks.gov/bryophytes/index.php>.

Common Name: Common names are not standardized and do not follow a particular concept or flora.

STATUS AND RANK

Please see the [Status and Rank Definitions for Plants](#) document for information about Status and Rank.

GEOGRAPHICAL DISTRIBUTION AND HABITAT

Habitat Comment – The physiographic provinces or geographical region in which each taxon is known to occur is indicated using the symbology described below, followed by known habitat. This information should not be regarded as the only province(s) or regions(s) of the state in which the species could occur; our knowledge of the flora of North Carolina is still very imperfect.

M-Mountains: All parts of North Carolina west of the foot of the Blue Ridge Escarpment.

P-Piedmont: All parts of North Carolina east of the foot of the Blue Ridge Escarpment and west of the Fall Line, including outlying “foothill” ranges, such as the Brushy,

Uwharrie, Sauratown, and South mountains. This province is shallowly underlain by crystalline metamorphic, igneous, or (rarely) consolidated sedimentary rocks

S-Sandhills: Portions of Cumberland, Harnett, Hoke, Lee, Moore, Richmond, Scotland, and Montgomery counties consisting mostly of deep aeolian sands of the Middendorf and Pinehurst formations (Cretaceous to Tertiary age). The Sandhills are really part of the coastal plain but are here distinguished because of their distinctive geomorphology and vegetation. Areas somewhat resembling the Sandhills region but occurring in other parts of the state (such as Carolina bay rims and aeolian or beach ridge deposits in the outer Coastal Plain) are considered part of the Coastal Plain Province.

C-Coastal Plain: All parts of North Carolina east of the Fall Line but excluding the Sandhills region and Tidewater. Generally consisting of unconsolidated sands, silts, clays, and peats, though rarely shallowly underlain by consolidated coquina limestone ("marl").

T-Tidewater: Areas associated with tidal water, such as the ocean and barrier islands, sounds, estuaries, and mainland brackish or salt marshes.

County - A listing of the known counties of occurrence is provided for each taxon in the NCNHP inventory. County names are followed by symbols (defined below). The counties listed reflect data currently in the NCNHP database.

* All recorded occurrences in the county are either extirpated, have not been found in recent surveys, or have not been surveyed recently enough to be confident they are still present. Occurrences are regarded as historical after they have not been surveyed for 20-40 years (the number of years depending on the species and the amount of habitat alteration in the area). An asterisk should not be regarded as a definitive statement that the species is gone from the county but indicates that its continued existence is uncertain.

+ Counties with obscure or undatable records

? There is some question as to the validity of the county report.

The botanical exploration of North Carolina is far from complete, and many additional county records will be found, generally (but not always) in proximity to counties listed. Most species that do not have county of occurrence information are new to the Rare List and county status information had not been compiled at the time of publication. Visit the North Carolina Natural Heritage Program [Species/Community Search](#) page for the most up-to- date county occurrence information.

We request information about any new occurrences in the state. If you would like to provide data and information to contribute to our database and broaden our understanding of the rare flora of North Carolina, please complete a NCNHP Plant Survey Form.

EXPLANATION OF STATUS AND RANK CODES

North Carolina Natural Heritage Program List of Rare Plant Species of North Carolina

STATUS

The N.C. Natural Heritage Program (NCNHP) works cooperatively with the U.S. Fish and Wildlife Service (USFWS) and the N.C. Plant Conservation Program (NCPCP) to ensure the continued survival of all of North Carolina's rich flora. The advice of these agencies' scientific councils and committees as well as legal protection designations have been considered in the creation of **North Carolina Natural Heritage Program List of Rare Plant Species of North Carolina**. This list incorporates the most recent federal status designations for all plants native to North Carolina and the current state status designation for plants on the state [Protected Plant Species List](#).

Many species that lack formal state or federal legal protection are nonetheless rare in North Carolina. To convey information about the rarity of these plants within the state, the N.C. Natural Heritage Program provides status designations that fall into two categories: Significantly Rare (SR) or Watch List (W). The Program collects data on these species in addition to those with a legal protection status.

Federal Legal Status

Definitions are derived from U.S. Endangered Species Act of 1973, Sec. 3 (USESA). For the purposes of the USESA, Congress defined species to include subspecies and varieties. For official definitions and lists of protected species, consult the U.S. Fish and Wildlife Service (USFWS).

E = Endangered: any species in danger of extinction throughout all or a significant portion of its range.

T = Threatened: any species likely to become Endangered within the foreseeable future throughout all or a significant portion of its range.

C = Candidate: any species whose status is currently under review by the USFWS to determine whether it warrants listing under the Endangered Species Act.

State Legal Status

Legal definitions are derived from N.C. Plant Protection and Conservation Act (NC General Statutes Chapter 106 Article 19B 106-202.12). For official definitions and lists of protected species, please consult the [North Carolina Plant Conservation Program](#).

E = Endangered: any species or higher taxon of plant whose continued existence as a viable component of the State's flora is determined to be in jeopardy by the NC Plant

Conservation Program Board; also, any species of plant determined to be an "endangered species" pursuant to the Federal Endangered Species Act.

T = Threatened: any resident species of plant which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range, or one that is designated as threatened by the Federal Fish and Wildlife Service.

SC-V = Special Concern-Vulnerable: any species or higher taxon of plant in North Carolina which requires monitoring, but which may be collected and sold under the provisions of the NC Plant Protection and Conservation Act and is likely to become a threatened species within the foreseeable future (O2 NCAC 48F .0401).

SC-H = Special Concern – Historical: any species or higher taxon of plant in North Carolina which requires monitoring, but which may be collected and sold under the provisions of the NC Plant Protection and Conservation Act and occurred in North Carolina at one time, but for which all known populations are currently considered to be either historical or extirpated (O2 NCAC 48F .0401)

W1 = Rare but Relatively Secure - Species whose status in N.C. is relatively well known and appear to be relatively secure at this time. While still notably rare, these species do not currently require site-specific monitoring and so are not on the Rare List. Many of these species were formerly on the Rare List; they are retained in this category because they require a lower level of monitoring to ensure their long-term security.

W2 = Rare but Questionable Taxonomy - Species that include taxa of dubious validity and taxa under study If further study reveals that these are valid taxa, they would warrant addition to the Rare List. This category has been used for named and unnamed taxa that currently appear to have some significant chance of being proven valid.

W3 = Rare but Questionable Documentation - Species that have been reported from N.C. without adequate documentation. These species should be listed at a higher level when their reported occurrence in N.C. is verified. This category includes sight records, old and vague reports for which no documentation has appeared, and, in a few cases, more recent literature reports for which we have not yet received documentation.

W4 = Rare but Believed Not Native - Species known to occur in N.C. that current data suggest are not native to N.C. but whose native occurrence is plausible. Some of these species were previously listed at a higher level, but field investigations suggest that all known N.C. occurrences are introductions.

W5 = Population Decline in NC - Species that are known to be declining in North Carolina for reasons beyond habitat loss. The distribution or population sizes of such species in the state are relatively well-known. Reasons for decline include exotic pests or pathogens, overcollection, poaching, and failure of reproduction. Because many of these taxa were once abundant or even dominant in parts of N.C., they may still be fairly

common or frequently encountered, despite the strong decline. If current trends continue, however, many of these species will be threatened with extirpation in all or a major part of their ranges in N.C.

W7 = Poorly Known in NC - Species with inadequate information about their distribution and rarity in N.C. These are generally species which appear to be rare based on museum records and field experience of NCNHP staff, consultants, and cooperating scientists. Further information is needed to determine the true status of these species in N.C.

State Natural Heritage Status – Significantly Rare

Significantly Rare is a NCNHP designation. Any plant species which has not been listed by the U.S. Fish and Wildlife Service as Endangered, Threatened, or Candidate or by the N.C. Plant Conservation Program as an Endangered, Threatened, or Special Concern species, but which exists in the state (or once occurred in the state) in small numbers (generally fewer than 100 populations) and has been determined by the NCNHP to need **monitoring and tracking**. Significantly Rare species include species of historical occurrence with some likelihood of rediscovery in the state and species substantially reduced in numbers by habitat destruction, direct exploitation, or disease. Species considered extirpated in the state, with little likelihood of rediscovery, are given no N.C. status (unless already listed by the NC Plant Conservation Program as E, T, or SC).

SR-L = **Significantly Rare-Limited**: the range of the species is **limited** to North Carolina and adjacent states (endemic or near endemic). These species may have relatively few populations in North Carolina and range wide. The preponderance of their distribution is in North Carolina and their fate depends largely on conservation here.

SR-T = **Significantly Rare-Throughout**: the species is rare **throughout** its range with relatively few populations range wide.

SR-D = **SR-Disjunct**: the species is disjunct to North Carolina from a main range in a different part of the country or world.

SR-P = **SR-Peripheral**: the species is at the **periphery** of its range in North Carolina. These species are generally more common elsewhere, occurring in North Carolina peripherally to their main ranges, often in habitats that are unusual in North Carolina.

SR-O = **Significantly Rare-Other**: the range of the species is sporadic or cannot be described by the other Significantly Rare categories.

RANK

Using a ranking system developed by NatureServe and the Natural Heritage Program Network, the North Carolina Natural Heritage Program (NCNHP) provides two ranks for each element. The global rank is based on an element's worldwide imperilment and

is designated by state Natural Heritage Programs working in coordination with NatureServe; the state rank is based on the imperilment of the element in North Carolina and is designated by the NCNHP. Element ranks are based on many factors, the most important ones being estimated number of Element Occurrences (EOs), estimated abundance (number of individuals), geographic range, relative threat of destruction, and ecological fragility.

Conservation Ranks are designated and updated by NCNHP for all species known to occur in North Carolina (both native and non-native). The Program follows the methodology and guidance of NatureServe when applying Conservation Ranks. Definitions of NatureServe's Conservation Ranks and Codes are published by NatureServe.

State Rank

State ranks are designated by the North Carolina Natural Heritage Program (NCNHP), following methodology and guidance from Natureserve. This allows approach allows for consistency among many programs and across state lines. The definitions provided below follow the [NatureServe Subnational Conservation Status Definitions](#) published by NatureServe.

S1 = Critically Imperiled —At very high risk of extirpation in North Carolina due to very restricted range, very few populations or occurrences, very steep declines, severe threats, or other factors.

S2 = Imperiled —At high risk of extirpation in North Carolina due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.

S3 = Vulnerable — At moderate risk of extirpation in North Carolina due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.

S4 = Apparently Secure — At a fairly low risk of extirpation in North Carolina due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.

S5 = Secure — At very low or no risk of extirpation in North Carolina due to a very extensive range, abundant populations or occurrences, with little to no concern from declines or threats.

SH = Possibly Extirpated - Known from only historical records but still some hope of rediscovery. There is evidence that the species may no longer be present in North Carolina, but not enough to state this with certainty. Examples of such evidence include (1) that a species has not been documented in approximately 20-40 years despite some searching and/or some evidence of significant habitat loss or degradation; (2) that a species or ecosystem has been searched for unsuccessfully, but not thoroughly enough to presume that it is no longer present in the jurisdiction.

SX = Presumed Extirpated—Species or ecosystem is believed to be extirpated from North Carolina. Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.

SU = Unrankable — Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

SNA = Not Applicable — A conservation status rank is not applicable because the species or ecosystem is not a suitable target for conservation activities (e.g., long distance aerial and aquatic migrants, hybrids without conservation value, and non-native species or ecosystems).

S#S# = Range Rank —A numeric range rank (e.g., S2S3 or S1S3) is used to indicate any range of uncertainty about the status of the species or ecosystem.

S#? = Inexact Numeric Rank —Denotes inexact numeric rank.

Global Rank

Global ranks are designated by NatureServe and are provided by the North Carolina Natural Heritage Program (NCNHP) for information only. For the most current global ranks, please consult the [NatureServe Explorer](#). The definitions provided below follow the [Definitions of NatureServe Global Conservation Status Definitions](#).

G1 = Critically Imperiled — At very high risk of extinction or elimination due to very restricted range, very few populations or occurrences, very steep declines, very severe threats, or other factors.

G2 = Imperiled — At high risk of extinction or elimination due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.

G3 = Vulnerable — At moderate risk of extinction or elimination due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.

G4 = Apparently Secure — At fairly low risk of extinction or elimination due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.

G5 = Secure — At very low risk of extinction or elimination due to a very extensive range, abundant populations or occurrences, and little to no concern from declines or threats.

GH = Possibly Extinct — Known from only historical occurrences but still some hope of rediscovery. Examples of evidence include (1) that a species has not been documented

in approximately 20-40 years despite some searching and/or some evidence of significant habitat loss or degradation; (2) that a species or ecosystem has been searched for unsuccessfully, but not thoroughly enough to presume that it is extinct or eliminated throughout its range.

GX = Presumed Extinct — Not located despite intensive searches and virtually no likelihood of rediscovery.

GU = Unrankable — Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

GNA = Not Applicable — A conservation status rank is not applicable because the species or ecosystem is not a suitable target for conservation activities. A global conservation status rank may be not applicable for several reasons. Typically, the species is a hybrid without conservation value, or of domestic origin.

G#G# = Range Rank — A numeric range rank (e.g., G2G3, G1G3) is used to indicate uncertainty about the exact imperilment of a taxon or ecosystem type.

G#? = Inexact Numeric Rank - Denotes inexact numeric rank.

G#T# = Infraspecific Taxon (trinomial) - The status of infraspecific taxa (subspecies or varieties) are indicated by a "T-rank" following the species' global rank. T-ranks follow the same principles outlined above. For example, the global rank of a critically imperiled subspecies of an otherwise widespread and common species would be G5T1..

GNR = Unranked — Global rank not yet assessed.

G#Q = Questionable taxonomy that may reduce conservation priority - Distinctiveness of this entity as a taxon is questionable; resolution of this uncertainty may result in change from a species to a subspecies or hybrid, or inclusion of this taxon or type in another taxon or type, with the resulting taxon having a lower-priority (numerically higher) conservation status rank.

PLANT TAXA ENDEMIC TO NORTH CAROLINA

This is a list of all taxa (including subspecies) considered to be strictly endemic to North Carolina. The list does not include taxa whose range barely extends into another state, such as taxa endemic to the Roan Mountain area or Great Smoky Mountains National Park.

SCIENTIFIC NAME	COMMON NAME	N.C. STATUS	U.S. STATUS	N.C. RANK	GLOBAL RANK
<i>Acanthothecis fontana</i>	Fontana Lichen	W7	N/A	S1	G1
<i>Allium keeverae</i>	Keever's Onion	T	N/A	S1S2	G2
